SC100
Sensor Controller

Demonstration datasheet - Revision A

1. Temperature specifications

These are separate specifications. A storage rating does not establish an allowable operating condition.

Specification	Value
Operating ambient temperature	-40 to +85 °C
Storage temperature	-55 to +125 °C

Operating ambient temperature: -40 to +85 °C.

Storage temperature: -55 to +125 °C.

Scope

This document describes the fictional SC100 component only. All values are invented for software demonstrations. Do not use them for component selection or engineering decisions.

Electrical characteristics

2. Supply current

Parameter	Typical value	Test conditions
Supply current	30 mA	25 °C, VDD = 3.3 V

Typical supply current: 30 mA at 25 °C and VDD = 3.3 V.

The current is a typical value under the stated test conditions. It is not a guaranteed maximum across all temperatures and supply voltages.

3. Reliability information

This excerpt covers temperature and supply current. Reliability test results are outside its scope.

Reading notes

Check the type of limit, units, and test conditions before applying a value. Preserve table headings and nearby explanatory text when extracting this document.
